

Comeau Aerospace Inc. - Perspective

Comeau Aerospace Inc. is for people who love adventure, flying, aircraft and who believe in the power of an energizing life purpose. It is a purpose of incredible magnitude and vision, one that will not materialize overnight, but will be a work in progress like anything else.

There is a special place that has no limits, in the imagination and in the heart we know that the aircraft we propose will be engineered and built with brilliant aerospace genius and a incredible passion for excellence and achievement. We believe that these aircraft will take their rightful place in the sky, in a future not far from here.

We focus on the present and the future. We can go back in time or forward in time with our brilliant faculties of imagination, perception and awareness, we can visualize what it will be like and what we could do to make it a reality. We know that everyday is a chance to make our lives and our world everything we want it to be, with the alternate reality creation engine.

Our time is now. Our opportunity is to be transformed, to grow and experience a whole lot more in life, with a new perspective, a stronger vision, trust and confidence in ourselves and our country, in our everyday life. We can go forward boldly, build and achieve great things together, to do things that have never been done before, something fantastic, awesome, dynamic, exciting and alive, something brilliant, the state of the art, something way beyond what has been done and what exists now, except for in the creative imagination of a few.

Comeau Aerospace Inc. is much more than the exercise of imagination and wishful thinking, it is we believe, a step into the next direction on an exhilarating journey that will let us *“Experience the greatest adventure of all time.” Why? Energy and vitality for the heart and soul.*

Comeau Aerospace Inc. is The Ultimate Flying Machine Adventure.

It is also a resolution to reach out, and do whatever it takes to make a difference for the people we know personally and our society. It is about being all we can be knowing that we must trust ourselves as we establish our goals and work diligently to achieve overwhelming success in our all endeavours.

Naturally, we can apply ourselves to be as down to earth as possible. This means some traditional designs, manufacturing, materials, propulsion, technology and industry practices, the knowledge base, it also goes way beyond that, but it is something you can relate to, fundamental aerodynamics and design are relevant, even with electrodynamic spacecraft, anti-gravity, advanced propulsion and some really cool things you might be lucky to find in a sci-fi movie or television show...but can be introduced or developed one way or another.

There are people with creative imagination who are visionary, who like to be creative, productive, who like challenges and enjoy those rewards of achievement, excellence, personal initiative, free enterprise, a confidence and faith in the future and the work that they believe in, who can transform the world of present reality with super reality, real perspective. There are people who are decisive, get involved, make effort, not excuses, direct resources, they don't wait for everything to be perfect, they focus, work, design, build, invent and create.

Our vision is bold, we will utilize considerable resources to achieve these goals, it takes work, energy, purpose, math, science, art, money, materials, infrastructure, co-operation, people who are excited, enthusiastic and capable of being involved in anyway they can in the ultimate flying machine design engineering projects, and living the Ultimate Flying Machine Adventure! We encourage you to be a part of Comeau Aerospace Inc. today, your resolution starts with action. Your response, your initiative and capacity can make all the difference!
