

Comeau Aerospace Inc. - Advanced Projects
The Ultimate Flying Machine Design Engineering Projects

CAI-817 Providence : Providence

- a series of strategic and tactical airlift and logistics vehicles;
- inter-connected unified lift platform design for increased load and speed;
- conventional and advanced propulsion, anti-g, hover and vertical climb;
- all weather extreme environment - est 30,000 ft;

- multi-purpose material delivery, secure supply;
- multi-purpose mission tasking modules air and ground support;
- fast loading and unloading of container and payload;
- precision logistics;

- communication modules for advanced reconnaissance and personnel ;
- augment forward observer mission tasking;
- custom sensor detection, tracking, logistics, particles, infrared, motion etc.;
- anti-drone technology equipped-command, control, intercept and destroy options;

- armoured for asset protection logistics in dangerous environments;
- emergency personal airlift and asset recovery, aerial search and rescue;
- emergency medical supplies, stretcher, rescue gear and life support;
- compact and mobilized in seconds, truck, air and marine craft deployable;

- mountain modules - rope, hardware, gear, augment mobility;
- more weapons, ammo, fuel, food, water, shelter, supplies, tools ;
- advanced detection, ground radar, mine sweep, mission options ;
- zip line and gear deployment, mountain and rough environments ;
- support and material logistics for just about anywhere...

Providence sounds a lot like something from God...
With a comprehensive, brilliant, forward looking plan,
that is strategic, operational and tactical,
capabilities, resources, options and good luck by hard work...
is practical, tactical, logistical and logical,
and allows magic to be at work anywhere...

With the right kind of competent personnel and command decisions,
providence is enabled, augmented, amplified and ensured,
everyday valour, courage and fortitude...the peak experience
exceptional self sacrifice of individuals or a dedicated team,
special operational units that exceed expectations,
life and death hangs in the balance, time is ticking...relentlessly...
the tenacity to survive in incredible dangerous environments...
What if you could have the right thing at the right time...?
Will you shift the space time continuum?
the last and ultimate word in logistics..
